RETHINK YOUR bizhub FUNCTIONALITIES

Giving Shape to Ideas

CLEVER APPLICATIONS RIGHT AT YOUR FINGERTIPS

Today's business world is changing faster than ever before. Companies have to adapt to new challenges in next to no time; and the way we work is transformed by new technologies that solve problems quickly and efficiently – including the “new normal” of more and more people working from home. In the context of these rapid and dramatic changes, multifunctional devices also need to adapt fast.

With Konica Minolta MarketPlace, your bizhub multifunctional devices are equipped with a powerful application store that lets you upgrade your device and its available functionalities to your individual needs. Find useful Apps directly from your bizhub multifunctional device. Enhance your bizhub functionality with Apps & Services that streamline your work processes; and take advantage of a connected office that boosts your own and your employees' efficiency.

Higher productivity for your knowledge worker

With the Konica Minolta MarketPlace, you make your business devices even more powerful as you add new capabilities that let you bridge time-consuming gaps between work processes – which in turn gives you more time to focus on your core tasks. Just simply select the Apps & Services according to your needs from the MarketPlace webstore available from konicaminoltamarketplace.com or directly from your multifunctional device.

Optimised total cost of ownership

With Konica Minolta MarketPlace, you can easily install target applications right from your MFP display. Moreover, for larger deployments, simply install Apps from the MarketPlace website to target devices without the need to walk up to each device. All applications & services are kept up to date via the MarketPlace and does not require further professional services for maintenance. MarketPlace Applications & services run on the MFP or either as a cloud service and does not require any additional investments into infrastructure. Especially your IT department will benefit from massive time savings and be able to better support your core business.

ENRICH YOUR BUSINESS WITH POWERFUL APPLICATIONS

Cloud Connectivity

Connect your bizhub multifunctional devices to popular cloud services like SharePoint Online, OneDrive, OneDrive for Business, MS Teams, Google Drive, Dropbox or Box.com. These Apps allow navigating through the dedicated storage location as well as executing basic file or folder operations like copy, cut or preview. Scan conveniently into the desired location or select files for printing. With the single sign-on functionality, your employees can quickly access the service without needing to enter their login credentials each time they walk up to the device.

Customisation and Personalisation

MarketPlace provides customisation and personalisation options. Its UI Designer for instance lets you customise your MFP's functions and features to your individual preferences. You can thus define the navigation scheme and available functions completely individually and create a personal experience that improves the time spent in front of the device, as it will only display the chosen features as well as selectable options.

With the Personalize App it is even possible to define the user experience on a per user level. Each of your employees can individually choose their preferred MFP language and select which functions should be presented on their home screen. The individual configuration of the MFP will not affect any other user as each personalised setup will only be shown to the individual user. Therefore, your employees are able to optimise their working routines on their own by defining the MFP functionality exactly as they need it.

Personalisation and customisation possibilities provided by MarketPlace ensure that your MFP adapts to your individual style of working rather than you needing to adapt to the device functionality – your benefit: improved and streamlined processes!

Security

The SECURE Notifier ensures that your bizhub device is always protected. It indicates to your employees whether the device meets the bizhub secure standard. Users can thus easily identify potentially unsafe devices in order to pass them by and operate on a secured bizhub device. If a device turns into an unsecured status, the Notifier will inform even your MFP administrator about the status change in order to perform mandatory counteractions.

KONICA MINOLTA
