**DOCUMENT
MANAGEMENT**

Content Security's Key Features

Advanced rights management

11 different user security roles ranging from "read only" to "System Administration" to provide an appropriate level of user access permissions.

Two-factor authentication

Add a security level by requiring a second factor authentication using SMS, email code or Google authenticator.

Data encryption

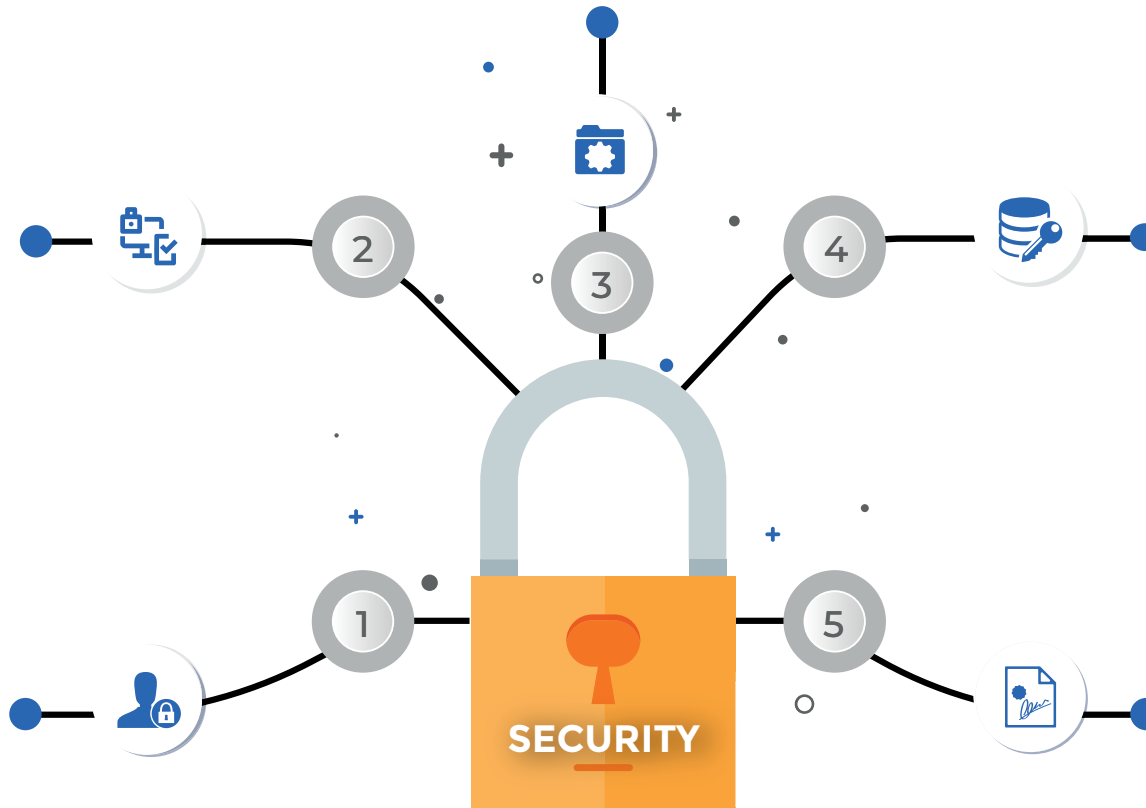

Secure documents stored by encrypting DMS data and metadata using an AES-256 encryption algorithm.

Secure login

Connect safely to the environment by entering a login and a password.

Digital watermarking

Dynamically apply watermarks displaying individual user information to prevent the use of Windows print screen and screen grabber applications.

Collaboration's Key Features

Documents linking

Link related documents together.

Date reminder

Set a reminder on a document's due date.

Discussion threads

Create discussion threads with contacts on documents and folders.

Simplified sharing

Share a document through a secure and temporary link with one or more users not registered in the application.

Dashboard

Gain total visibility over your content with a quick access to your notifications and favorite documents.

Notifications

Be notified in real time of tasks to be performed or actions made on documents.

Tasks

Assign tasks to others.

Workflows

Manage document approvals or reviews by assigning tasks to different people for completion in real time.

Versioning

Manage multiple variations of the same document to display the one of your choice.
