SIMPLICITY

FLEXIBILITY

SPEED

Customizable workflow solution for high volume work environments, complex jobs, and tight deadlines

To meet the challenges in today's commercial print environment, print shops and CRDs need to boost their productivity, reduce rising costs, and deliver quick turnaround times. With the Dispatcher Phoenix family of document workflow software products, common document processing, routing, and printing tasks are automated and streamlined, allowing you to make tight deadlines, maximize efficiency, and grow your business while reducing costs. You can eliminate manual paper changes, route files to the best printer for the job, customize complex print jobs, automatically despeckle, deskew, and annotate files, watermark proofs before sending them to customers, configure MFP scan settings for specific jobs, and much more – all with the touch of a button.

STREAMLINE
YOUR PRODUCTION WORKFLOW

Dispatcher Phoenix gives you the tools you need to optimize your workflow when using production print systems. You can quickly and easily create a customized workflow to suit your needs using the innovative Workflow Builder tool. Set up your workflows for automatic file collection, processing, and distribution, or schedule them to run on a particular day and time to best manage your resources. Unique LiveFlo technology allows you to view an animation of files running through your workflow in real-time. And with Dispatcher Phoenix's seamless panel integration, scanning, processing, and storing large volume documents is easy and intuitive.

CUSTOMIZE PRINT FILES

Print files can be received from LPD print streams as well as other inputs. And Dispatcher Phoenix's powerful file parsing processes can evaluate, modify, and route files (Text, Postscript, PCL, etc.) based on user-defined conditions. Examples include:
· Insert tray call commands into print streams.
· Dynamically configure simplex jobs for duplex output.
· Add blank pages into a document.
· Set finishing options, output quantities, job attributes.
· Handle multiple sheet inserts.

MAXIMIZE PRINT RESOURCES

Save both time and money by routing files automatically, ensuring that you always use the most suitable printer for the job.

- Color Routing – Route files based on the number of color pages or the percentage of color in the job.
- Page Count Routing – Send large documents to high speed production printers, routing files based on the number of pages in each document.
- Metadata Routing – Use file metadata to route based on content for easy organization of your documents.

ACCESS FROM THE DISPLAY PANEL

Dispatcher Phoenix is seamlessly integrated on the production printer panel in a visually enhanced, easy-to-use display.

- Browse through your PC folder structure to find the appropriate storage location for your scanned documents.
- Connect to major document management systems, such as OnBase®, Microsoft SharePoint®, and Worldox®.
- Speed up file indexing with Dispatcher Phoenix's support for automated indexing/database lookups.
- Edit Bates stamp, Redaction, and Highlight/Strikeout configurations directly from the panel.

Currently supported on the bizhub PRO 951, bizhub PRESS 1052 and bizhub PRESS 1250.

DISPATCHER PHOENIX OFFERINGS

Dispatcher Phoenix Foundations
An easy-to-use, cost-effective solution for document processing, routing, and printing. Optional modules can be included at any time to add even greater functionality to your workflows.

Dispatcher Phoenix Professional
Includes advanced features such as file parsing tools, job routing, metadata processing, Microsoft SharePoint Connector, and much more.
